Peter Marti

Theory of Structures
Fundamentals, Framed Structures, Plates and Shells

This book provides the reader with a consistent approach to theory of structures on the basis of applied mechanics. It covers framed structures as well as plates and shells using elastic and plastic theory, and emphasizes the historical background and the relationship to practical engineering activities. This is the first comprehensive treatment of the school of structures that has evolved at the Swiss Federal Institute of Technology (ETH) in Zurich over the last 50 years.

Structural Concrete
Journal of the fib

Structural Concrete, the official journal of the fib, provides conceptual and procedural guidance in the field of concrete construction, and features peer-reviewed papers, keynote research and industry news covering all aspects of the design, construction, performance in service and demolition of concrete structures.

A membership with the fib – International Federation for Structural Concrete, includes the delivery of the journal print and online.

Ernst & Sohn also publishes many print titles as ebooks. Most titles are available in the formats ePDF, ePUB and Mobipocket.

Where to order

Europe, Middle East & Africa
John Wiley & Sons Ltd.,
1 Oldlands Way, Rognor Regis,
West Sussex, PO22 9SA, UK
Tel: (UK only) 0800 243407
or (for overseas orders)

The Beton-Kalender (Concrete Yearbook) is a very important source of information for engineers involved in design, analysis, planning and production of concrete structures. It is published on a yearly basis and offers chapters devoted to various subjects with high actuality. Any chapter gives extended information based on the latest state of the art, written by renowned experts in the areas considered. The subjects change every year and may return in later years for an updated treatment. This publication strategy guarantees, that not only the most recent knowledge is involved in the presentation of topics, but that the choice of the topics itself meets the demand of actuality as well.

For decades already the themes chosen are treated in such a way, that on the one hand the reader is informed about the backgrounds and on the other hand gets acquainted with practical experience, methods and rules to bring this knowledge into practice. For practicing engineers, this is an optimum combination. Engineering practice requires knowledge of rules and recommendations, as well as understanding of the theories or assumptions behind them, in order to find adequate solutions for the wide scope of problems of daily or special nature.

By the actual selection of topics and the way those are treated, the Beton-Kalender (Concrete Yearbook) offers a splendid opportunity to get and stay aware of the development of technical knowledge, practical experience and concepts in the field of design of concrete structures on an international level.

Dr.-Ing. Frank Fingerloos has been with the German Society for Concrete and Construction Technology (DBV) since 2000 with responsibility for design, construction engineering, to a building structure classification.

Beton-Kalender Series

- **Concrete Structures for Wind Turbines**
  - Series: Beton-Kalender Series
  - Series editors: K. Bergmeister, F. Fingerloos, J.-D. Wörner
  - The wind energy industry in Germany has an excellent global standing when it comes to the development and construction of wind turbines. Germany currently represents the world’s largest market for wind energy. The ongoing development of ever more powerful wind turbines plus additional requirements for the design and construction of their offshore foundation structures exceeds the actual experiences gained so far in the various disciplines concerned.
  - Rüdiger Meiwinkel, Julian Meyer, Jürgen Schnell
  - Design and Construction of Nuclear Power Plants
  - Series: Beton-Kalender Series
  - Series editors: K. Bergmeister, F. Fingerloos, J.-D. Wörner
  - Despite all the efforts being put into expanding renewable energy sources, large-scale power stations will be essential as part of a reliable energy supply strategy for a longer period. Given that they are low on CO₂ emissions, many countries are moving into or expanding nuclear energy to cover their baseload supply. Building structures required for nuclear plants whose protective function means they are classified as safety-related, have to meet particular construction requirements more stringent than those involved in conventional construction. This book gives a comprehensive overview from approval aspects given by nuclear and construction law, with special attention to the interface between plant and construction engineering, to a building structure classification.

- **Design of Fastenings for Use in Concrete – the CEN/TS 1992-4 Provisions**
  - Series: Beton-Kalender Series
  - Series editors: K. Bergmeister, F. Fingerloos, J.-D. Wörner
  - The European pre-standard CEN/TS 1992-4 for the design of fastening by means of headed studs, anchor channels as well as post-installed mechanical and chemical anchors is ready for use. The background and interpretation of the provisions related to the determination of actions and resistance based on limit state design, durability, fire resistance, fatigue and earthquake actions as required by CEN/TS 1992 are described in detail.

- **Reconditioning and Maintenance of Concrete Structures**
  - Series: Beton-Kalender Series
  - Series editors: K. Bergmeister, F. Fingerloos, J.-D. Wörner
  - The rehabilitation and maintenance of concrete structures takes place in the tense atmosphere of the different interests of client, building authorities, construction companies and material manufacturer. All involved parties should be interested in a general logical guaranteed concept of repair and maintenance measures necessary for a specified lifetime.
